                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       family of 76 kDa Helicobacter polypeptides (see AAW73022-32), GHPO 1360 and a 50 kDa polypeptide (see AAW73035). These polymuclectides were initially identified in a search of the yolori genomic databases. DNA cassettes for expression of the Helicobacter proteins (unprocessed or mature forms) in prokaryotic or eukaryotic cells are provided. The polymucleotides can be used in vacciness to prevent or treat Hb infection in a mammal. Viral (especially poxvirus) or bacterial vectors are used. Products and methods of the invention allow treatment and prevention of gastroduodenal diseases associated with Hb infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. Diagnostic and detection methods are also provided. GHPO 1360 was demonstrated to be a protective antigen. (Updated on 25-MAR -2003 to correct PI field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          뮍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş
                                                                         The invention relates to a method for inducing protective immune response to Helicobacter infection. The method comprising administering to a mammal by injection an immunogenic Helicobacter pylori polypeptide comprising a subunit of H. pylori urease admixed with an adjuvant having one or more heat-liable toxin of Escherichia coli (LT), B subunit of LT (LTB), cholera toxin (CT), and B subunit of CT. The method is useful for inducing an immune response to Helicobacter infection of H.pylori infection. The invention is useful as vaccine. The present sequence is Helicobacter
                                                                                                                                                                                                                                                                                                                                                                                                  Inducing immune response to Helicobacter useful for treating Helicobacter pylori infection, by administering immunogenic Helicobacter polypeptide admixed with adjuvant having heat-liable toxin of Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immune response; Helicobacter infection; adjuvant; heat-liable toxin; cholera toxin; CT; urease; therapy; antibacterial; vaccine; antigen; gene; ds.

CC (OMP) having no terminal Phe residue. The protein may be used in a CC vaccine to prevent or treat H. pylori infection or to identify H. pylori CC polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The DNA and probes derived from it may be used for the identification of H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as CC antisense sequences and can be used to prevent the translation of H. pylori mRNA. Antibodies against the protein can be used in immunoassays to evaluate the abundance and distribution of H. pylori-specific CC antigens. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial CC DNA. The sequences were analysed for ORF of at least 180 nucleotides, and CC the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid consequences predicted from various ORF were analysed for significant the other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be consequenced from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in B. coli hosts

New Helicobacter pylori antigens and related nucleic acid sequences - useful in serological diagnosis and protective vaccines, providing long-lasting immune response.

Claim 27; Page 123-124; 402pp; English.

The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunogractivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to center th. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma). (Updated on 20-WAR-2003 to correct PF field.)

```
The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunogractivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
US-10-039-183A-2 (1-299) x AAV90844 (1-1082)
                                                                                                                          The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunogractivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicribbial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma). (Updated on 20-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                 Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may k used for treating or preventing ulcers in a human or animal. This sequence encodes a selected interacting domain (SID), identified via
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 844

          The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to detect H. pylori-specific antibodies, for diagnosing infection or to detect meaning the protect against H.

This sequence encodes a Helicobacter pylori protein of unspecified CC function. The protein may be used in a vaccine to prevent or treat H. CC pylori infection or to identify H. pylori polypeptide binding compounds, CC useful as potential H. pylori life cycle activators or inhibitors. The CC DNA and probes derived from it may be used for the identification of H. CC pylori in a sample, and the diagnosis of H. pylori infection. Nucleic CC acid sequences complementary to the DNA act as antisense sequences, and CC can be used to prevent the translation of H. pylori mRNA. Antibodies CC against the protein can be used in immunoassays to evaluate the abundance and interest protein (ATCC 55679) was determined from overlapping contigs generated CC by mechanically shearing the bacterial DNA. The genomic sequence of the pylori (ATCC 55679) was determined from overlapping contigs generated CC defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF CC were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR camplification for recombinant polypeptide production, e.g. in E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                29-MAR-1996;

                                                   The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This sequence encodes a selected interacting domain (SID), identified via

EcoRI linkers were added to the mechanically sheared DNA and then cloned into lambda gtll. The library was mixed with E. coli strain Y1090 and screened. A 3.6 kb fragment of pertissis DNA was isolated from positive lambda clones. Two EcoRI fragments were subcloned into M13mp18 for sequencing. The OMP protein encoded by this DNA sequence is useful in a vaccine to prevent whooping cough, caused by B. pertussis infection. It is also useful as an adjuvant in vaccines against Haemophilus influenzae, hepatitis and herpes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 960 BP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
US-10-039-183A-2 (1-299) x ABN91511 (1-993)
                                                                                                                                                                                                                  Alignment
                                                                                                                                                                                                                                                                                                                          ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to creen for compounds able to interfer with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Staphylococcus antibacterial;

cc sequence with any of 3772 fully defined nucleate deguences (SEQ ID NO: 1-3772) and encoding an Staphylococcus epidermidis polypeptide with any of 3772 fully defined amino acid sequences (SEQ ID NO: 3772-7544) as CC given in the specification. Also described are: a recombinant expression vector; a cell comprising a recombinant expression vector of (1); CC producing an S. epidermidis polypeptide, an isolated mucleic acid CC comprising a nucleotide sequence of at least 8 nucleotides in length; a cyaccine composition for prevention or treatment of an S. epidermidis polypeptide above and a carrier; treating cc infection, composition for prevention or treatment of an S. epidermidis cc infection; detecting the presence of a Staphylococcus mucleic acid in a subject for S. epidermidis infection; a recombinant or substantially pure preparation of an S. epidermidis cc infection; detecting the presence of a Staphylococcus mucleic acid in a sample; a computer readable medium having recorded in it the nucleotide sequences with SEQ ID NO: 1-3772 or its fragments; a computer based computer based system for identifying fragments of the Staphylococcus genome of the Staphylococcus plasmids of commercial importance; a computer based system for identifying fragments of the Staphylococcus genome of the staphylococcus g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI; 200

                                                                                                                                                                                                                                                                                                                      Query Match:
                                                                                                                                                                                                                                                                                                                                                        Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in antilisteria vaccines. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
